EXECUTIVE SUMMARY

At approximately 8:40 am on January 23, 2012, several large boulders fell from the east side of Telegraph Hill near Montgomery and Lombard Streets. A car was crushed and the sidewalk was temporarily closed due to damage. There were no injuries. Several units of a residential building were temporarily evacuated as a precaution, while engineers assessed the hillside to determine if there was further threat of rockslides.

The Emergency Operations Center was partially activated to support the coordination of response efforts. By 4:30 pm on January 23, 2012, geologists concluded that all but one unit of the residential building was safe to re-occupy, and actions were identified to mitigate against further damage in the area below the rockslide.

The table below identifies the capabilities from the U.S. Department of Homeland Security’s Target Capabilities List (TCL) that were able to be tested in this limited response situation, in addition to the overall performance with each TCL.

<td>Intelligence and Information Sharing and Dissemination</td>
<td>Issues were assessed, identified and tracked to resolution.</td>
<td>Lack of clarity regarding the role of the EOC and DEM Duty Officer in support of field-level operations.</td>
</tr>
</tbody>
</table>

The partial activation of the Emergency Operations Center was a successful opportunity to test response procedures and information coordination among responding agencies. Overall, the actions taken in response to this incident were effective and reflected a high-level of inter-agency coordination.
